

100% Virgin Raw Material

Poliran Drip-Tape with Turbo Flat Drippers

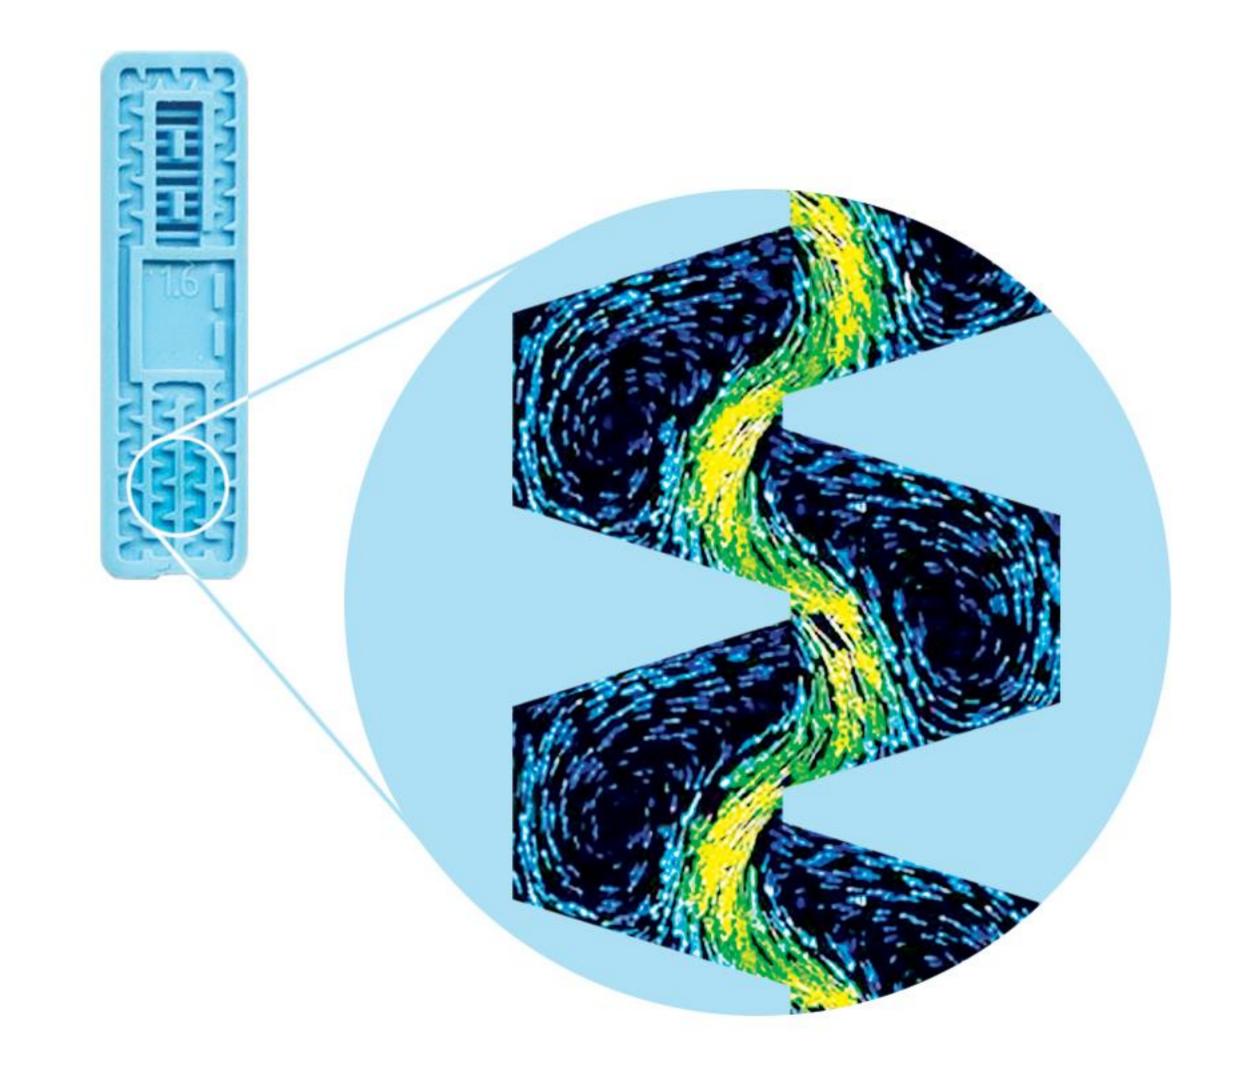

Poliran produces high-quality drip-tape using the best raw materials through its advanced high speed manufacturing lines (250 meter/minute). They are available in two sizes: 16 mm and 22 mm. The wall thickness can be adjusted from 160 to 450µ. The manufacturing lines' excellent accuracy and specially designed drippers result in a drip-tape that can be used in long lateral installations with lengths above the normal and acceptable coefficient of variation (CV).

Unique and precisely designed dripper production; The proper shape of the labyrinth, which is created with precision and certain spacing, causes the formation of two turbulent flows. This double flow combines rapid central flow with cyclone turbulence causes constant self-cleaning preventing particles into the system and ensure the uniform distribution of water through extended lateral lines. These advantages make it possible to establish extensive irrigation units covering 3-4 hectares that managing the land and controlling the farm will be enhanced.

Features

- Utilizing Turbo flat drippers with excellent CV and low exponent (x)
- Excellent uniformity of water emission in long length laterals (above 85%), which enhances yield per unit
- The world's best anti-clogging dripper, generating dual turbulent flows within its drippers, continuously self-cleaning
- Possibility of use in long lengths of laterals to reduce the mainline of irrigation system on the farm
- Utilizing the best and highest-quality virgin raw materials in product manufacturing for precise and long-term functionality
- Resistant to acids and common agricultural chemicals
- The best choice for row crops and seasonal application
- UV resistant

	Specificatio	n									
Diameter (mm)	16.1 - 22.2 - 25 - 28.5										
Thickness (micron)	160-450										
Standard Spacing(cm)	10, 15, 2	10, 15, 20, 25, 30, 33, 40, 50, 60, 75, 80, 90, 100									
Favorite Spacing		On Request									
Flow Rate (I/h)	0.8	1.3	1.6	2.5	3.8						
Coefficient of Variation	2.5	1.1	1.25	2	2						
Exponent	0.49	0.5	0.5	0.5	0.5						
Recommended Filtration		120 mesh / 130 micron									

Fast central flow

Cyclone turbulence, self-cleaning flow

Thickness: 160 micron

Available in different flow rates and favorite spacing on request.

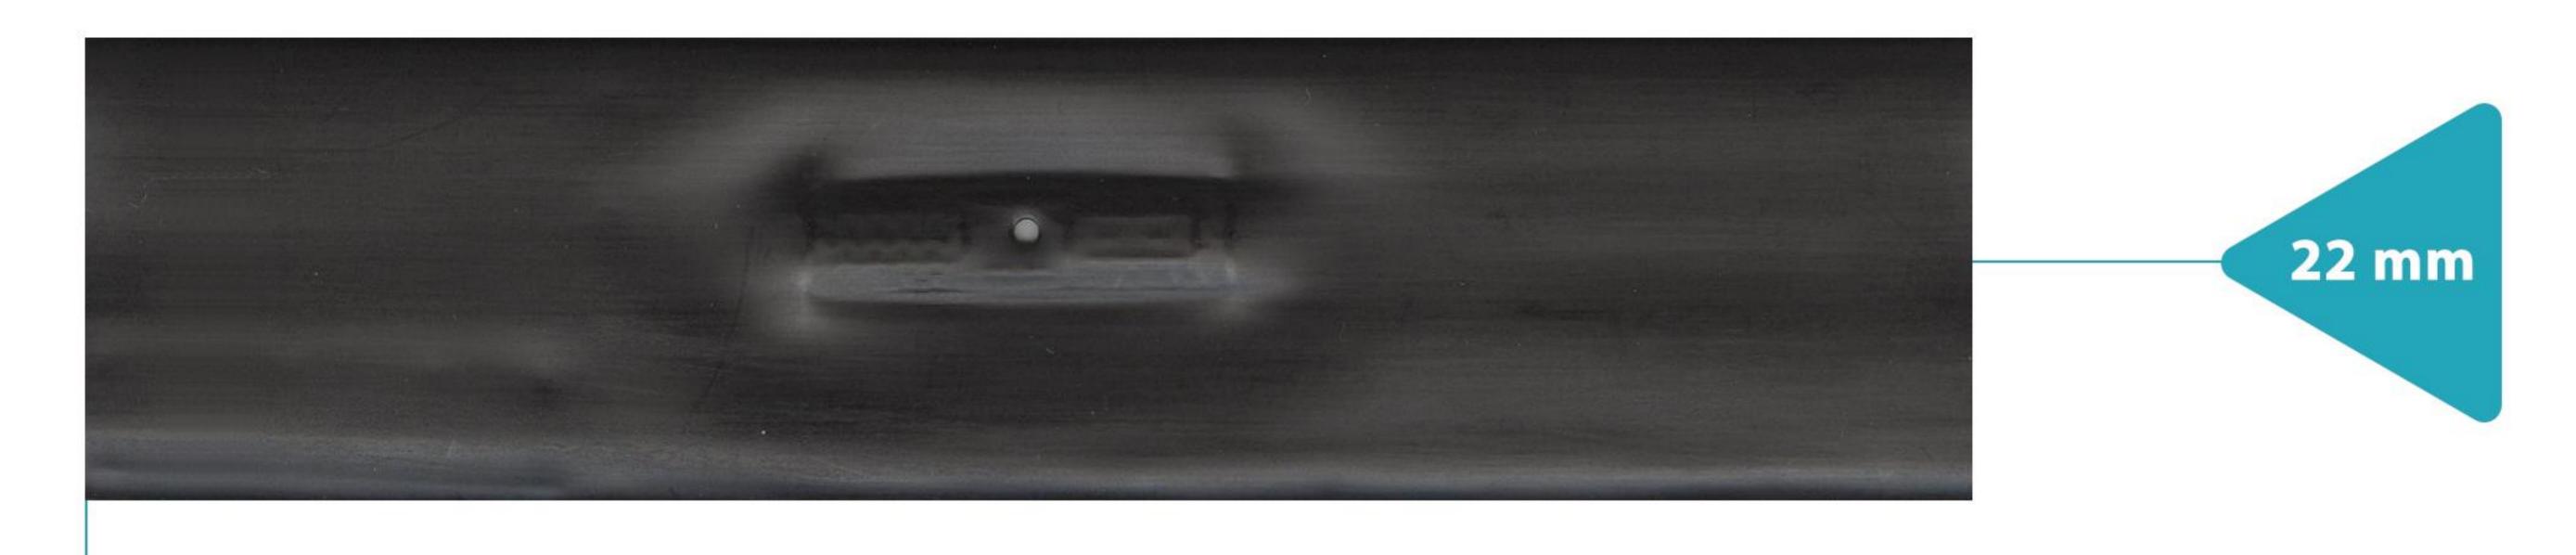

Thickness: 175 micron

Available in different flow rates and favorite spacing on request.

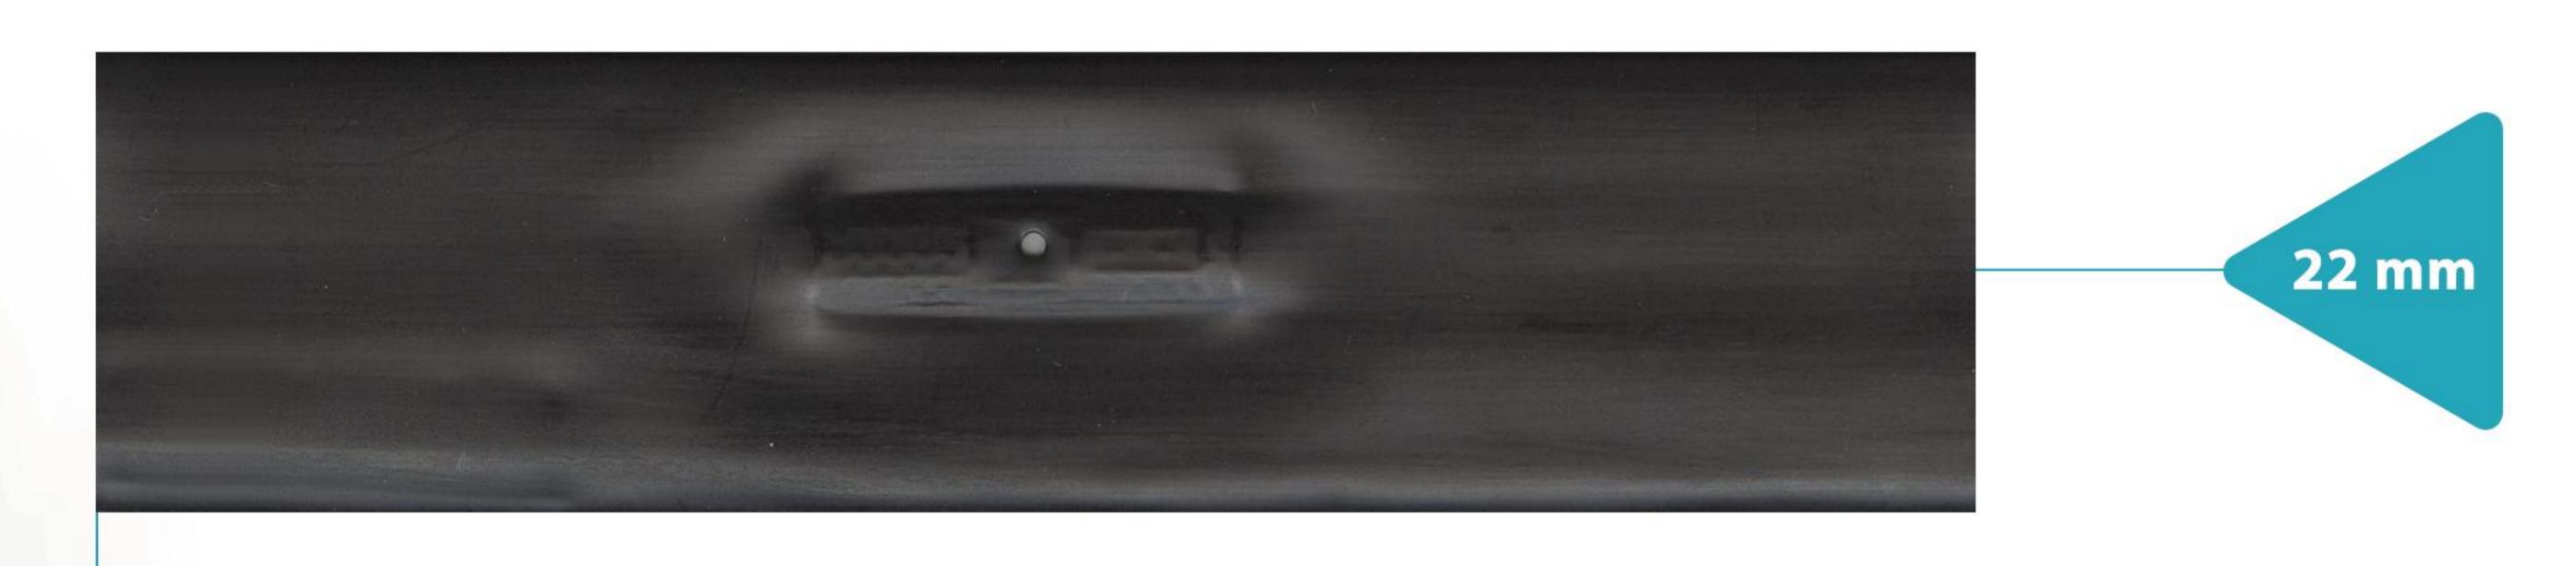

Thickness: 200 micron

Available in different flow rates and favorite spacing on request.

Thickness: 175 micron

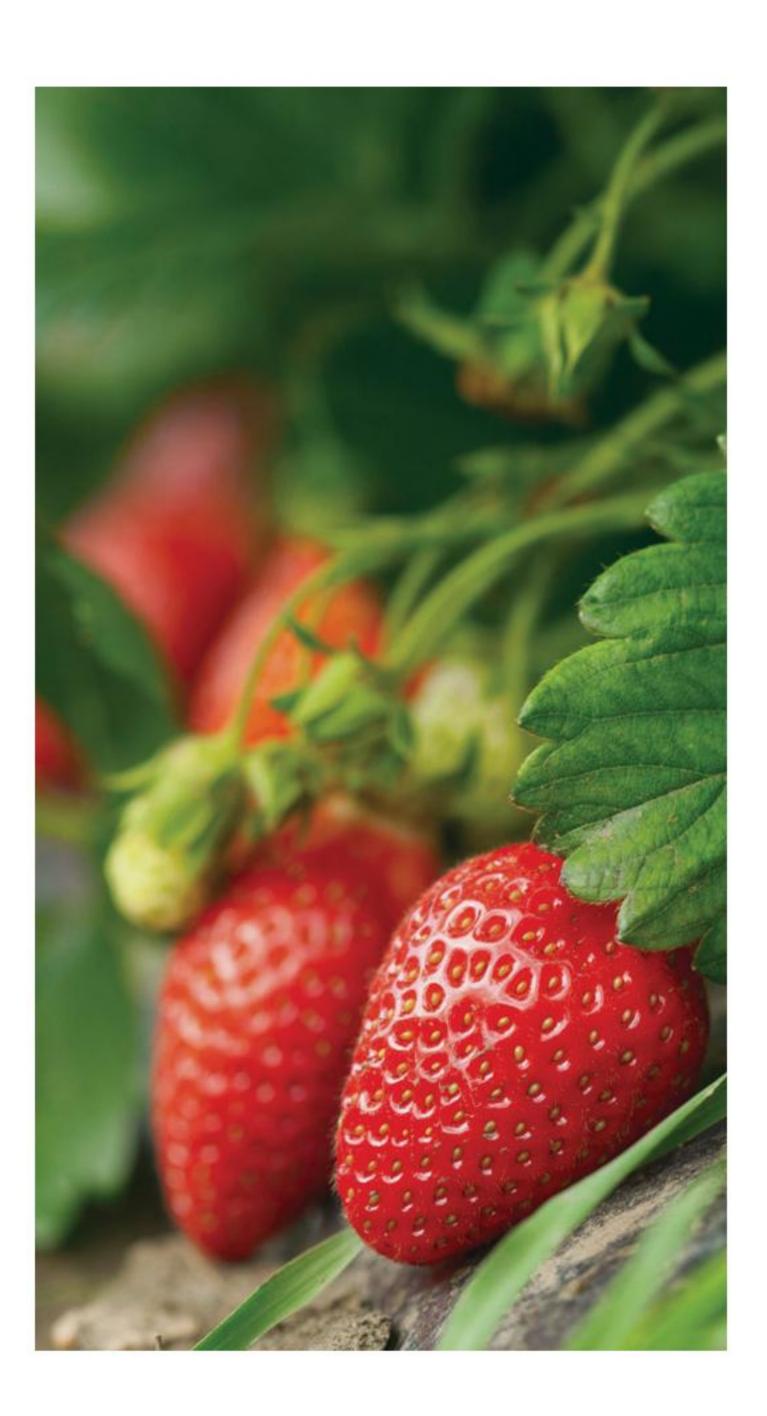

Available in different flow rates and favorite spacing on request.

Thickness: 200 micron

Available in different flow rates and favorite spacing on request.
